PROFESSIONAL SUMMARY

Software developer with hands-on experience in frontend and backend development, API integrations, workflow automation, and database-backed web applications. Gained practical experience during a 540-hour OJT internship at Geidi IT Services, where I built features, fixed bugs, and tested changes for client projects. I use AI tools to help build features, then review, test, and correct the results myself.

TECHNICAL SKILLS

Frontend: HTML, CSS, JavaScript, TypeScript, React, Next.js, Tailwind CSS

Backend and Databases: NestJS, Supabase, PostgreSQL, data import and record checking

APIs and Integrations: API and SDK research, Microsoft Graph and SharePoint, Microsoft Entra ID login setup, Model Context Protocol (MCP) research

Automation: Rule-based email workflows (EDA), SMTP email, Power Automate (training)

Development Tools: Git, GitLab, Playwright testing, Docker, Linux command line

AI-Assisted Development: Claude Code, Codex, Claude AI integration research, Ollama with Qwen, Hermes Agent with Composio

PROFESSIONAL EXPERIENCE

AI-Augmented Software Developer (OJT Intern), Geidi IT Services June 1 to September 11, 2026

- Enviro: Investigated the SMTP email feature that sends lists of expired documents. Fixed reported issues in the Training Matrix, certificate uploads, and error pages based on client and supervisor feedback, and improved error handling. The system was later completed and deployed.
- EDA: Traced an email problem where an expected message was not being received to a missing required file, added it, and confirmed the fix. Fixed dashboard issues with email data and rule information, and redesigned tenant-side pages for Overview, Managed Emails, Mailbox Setup, Rules and Learning, and Settings.
- AllSpec: Improved interface design, responsiveness, charts, and filters for production workflow pages. Built a notification page for reviewing more than 1,000 records with possible errors, and moved updated data to a new table so the live version was not disrupted.
- Research: Contributed to Grantlyst Stage 1 features and researched AI text extraction with Ollama and Qwen. Researched MCP and API and SDK options for connecting AI tools to business systems for Geidi MCP and iManage.

RELEVANT PROJECTS

Enviro Compliance Console | Workforce compliance system for certificates and expiry dates. Next.js, NestJS, Supabase, Microsoft Graph

EDA Email Automation | Shared inbox automation for sorting emails and applying rules. React, Next.js, TypeScript, Supabase

AllSpec Production Management System | Production workflow tracking from orders to dispatch. Next.js, React, TypeScript, Tailwind CSS, GitLab

EDUCATION AND CERTIFICATIONS

Associate in Computer Technology, Specialization in Software Development August 2024 – Present
University of San Jose–Recoletos

Certifications and Training: Google IT Automation with Python; Google IT Support; Microsoft Power Apps, Power BI, and Power Automate training

Award: Alliance RAD Training Outstanding Performance Award
